EX.NO:09 Blueprint in Zoho Creator

ROLL NO :240701573

NAME: UMAR FAROOK K

AIM:

To create a blueprint in Zoho Creator for the Appointment Scheduling form of the SmartCare – Clinic Management System application, defining the stages and transitions that an appointment passes through from scheduling to completion, cancellation or no-show.

THEORY:

Blueprint. A blueprint in Zoho Creator is a visual tool used to model a business process. It forces every record of a form to move through a predefined sequence of stages, so that the process is followed in the same way every time and no step can be skipped.

Stages. A stage represents a state of the record in the process, for example *Appointment Scheduled* or *Consultation Completed*. The record is in exactly one stage at a time, and the stage is stored in the record.

Transitions. A transition is the action that moves a record from one stage to the next, for example *Confirm Appointment*. It appears as a button on the record, and only the transitions available from the current stage are shown. Each transition has a name and a link name.

Transition settings. A transition can be configured in three parts: *Before* (who can perform it – everyone or selected users – and the criteria under which the button is shown), *During* (fields or data to be filled in while performing it) and *After* (actions executed once it is done, such as sending a notification or running a Deluge script). Properties such as a tooltip or a confirmation message can also be set.

Running a blueprint. A blueprint can be run for every record submitted (*Always*) or only when a condition is satisfied (*on condition*). Once it is enabled, new records start at the first stage and are moved forward only through the defined transitions.

Advantages. Blueprints give a clear picture of the process, enforce the sequence of steps, control who may perform each step, and automate follow-up actions, which reduces errors in the day-to-day work of an organisation such as a clinic.

PROCEDURE:

1 Sign in to Zoho Creator and open the SmartCare – Clinic Management System application.

2 Click the **Workflow** tab, open the **Blueprints** section and click **New Blueprint**.

3 On the “Run business process on record submission” page, choose the form **Appointment Scheduling**, name the blueprint **Appointment Management Blueprint**, select **Always** for “Run this blueprint” and click **Create**.

4 The blueprint builder opens with a blank canvas and the **Stages** and **Transitions** panels on the right.

5 Add the stages using **Add Stages** and drag them onto the canvas: Appointment Scheduled, Appointment Confirmed, Appointment Cancelled, Patient Checked In, Consultation In Progress, Consultation Completed and Patient No Show. Connect **Start** to **Appointment Scheduled**.

6 To add a transition, drag a connection from one stage to another. In the **Add Transition** panel, enter the transition name and click **Add**.

240701573

7 Create the transitions: *Confirm Appointment* (Scheduled to Confirmed), *Cancel Appointment* (Scheduled to Cancelled and Confirmed to Cancelled), *Check In Patient* (Confirmed to Checked In), *Mark Patient No Show* (Confirmed to No Show), *Start Consultation* (Checked In to In Progress) and *Complete Consultation* (In Progress to Completed).

8 Click a transition to open **Edit Transition** and set its owners (Everyone), criteria (Always) and the Before, During and After settings as required.

9 Click **Save Blueprint** and then **Done**.

10 In the Blueprints list, check that **Appointment Management Blueprint** is shown for the Appointment Scheduling form with the status **Enabled**.

OUTPUT:

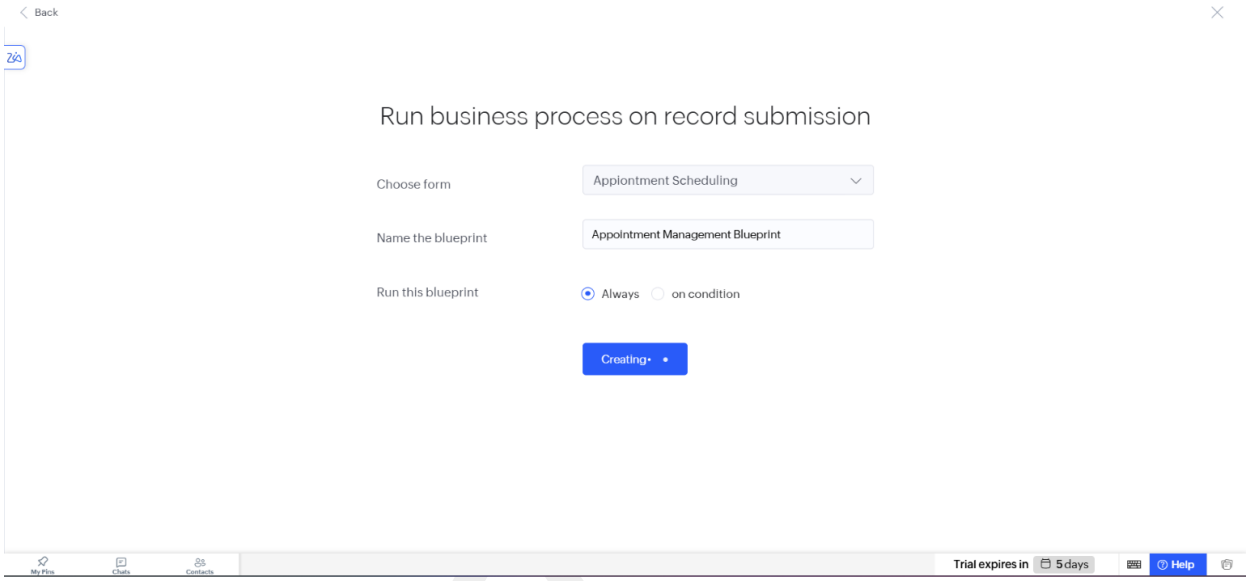

Fig. 1: Creating the blueprint for the Appointment Scheduling form

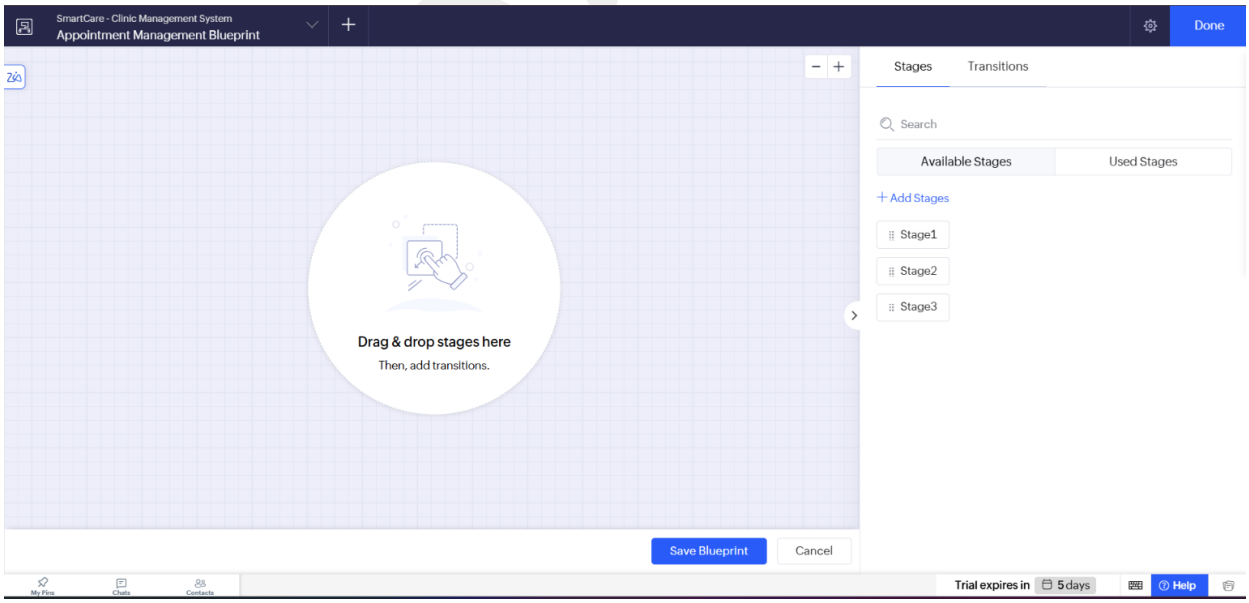

Fig. 2: Blueprint builder with the stages panel and an empty canvas

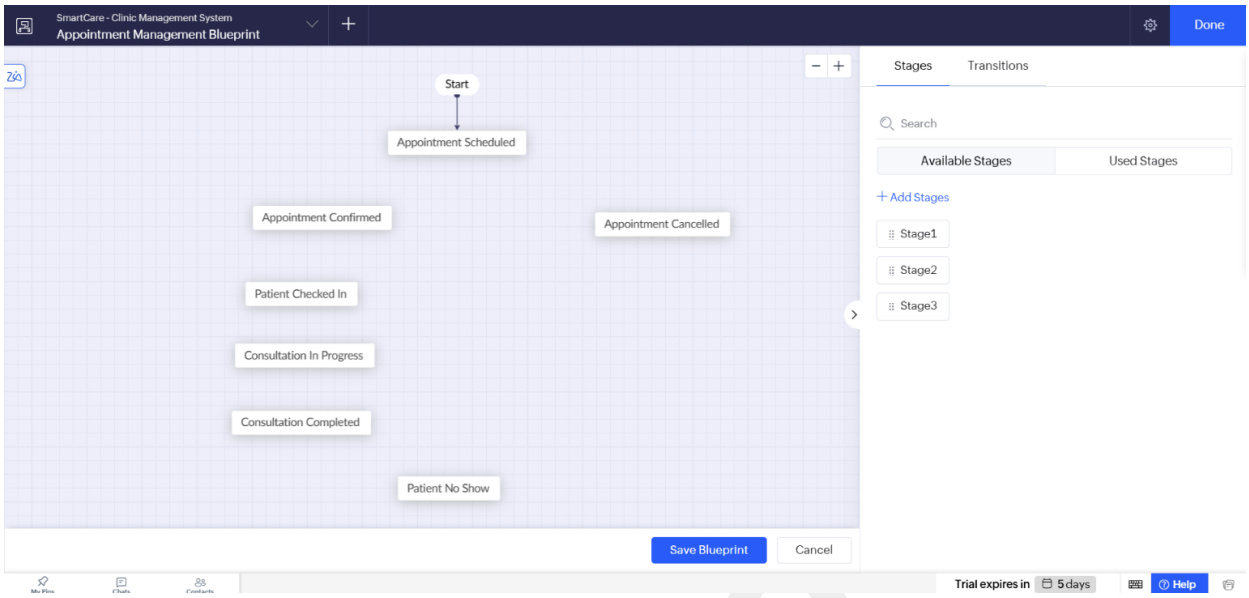

Fig. 3: Stages placed on the canvas and linked to Start

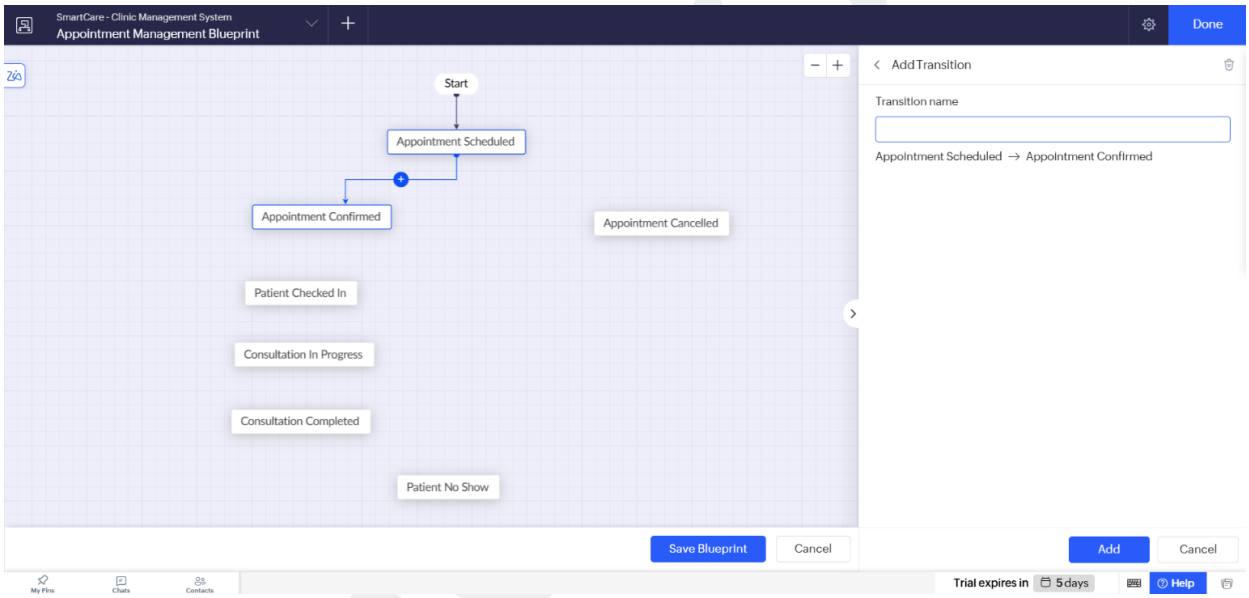

Fig. 4: Adding a transition from Appointment Scheduled to Appointment Confirmed

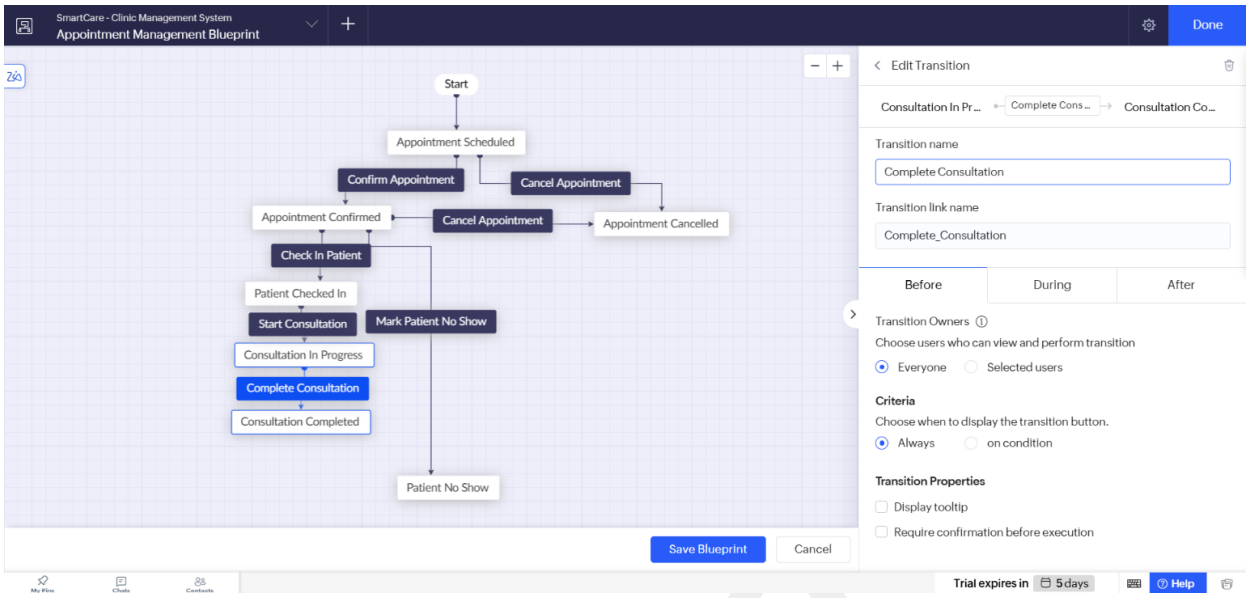

Fig. 5: Transitions between all stages and the Edit Transition settings (Complete Consultation)

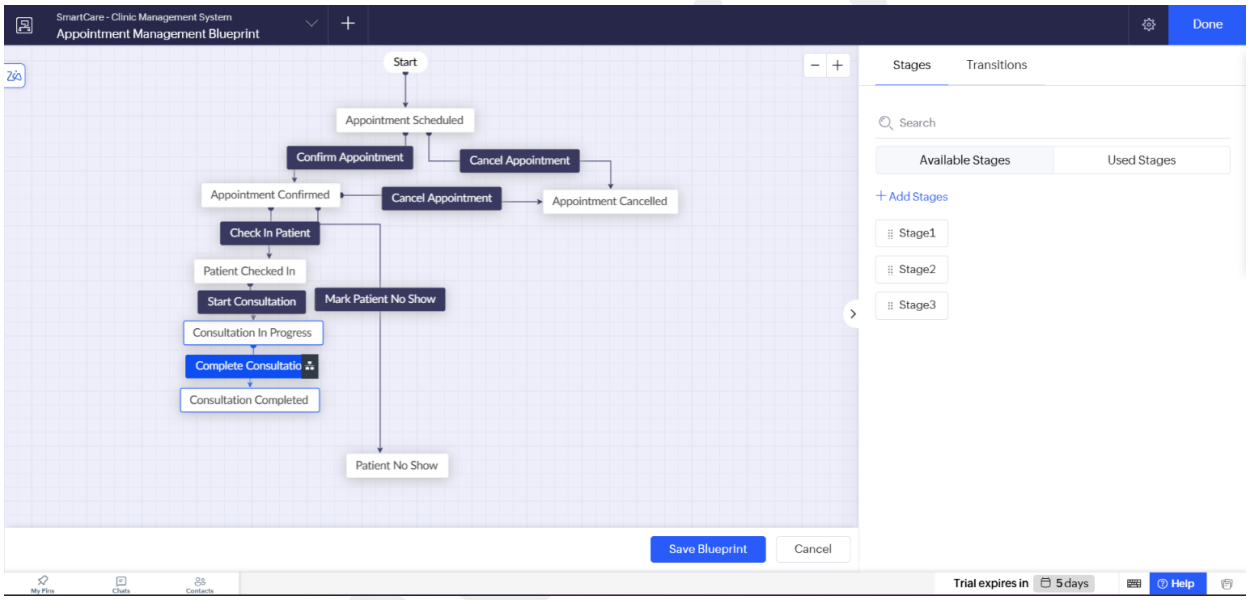

Fig. 6: Completed blueprint flow of the appointment process

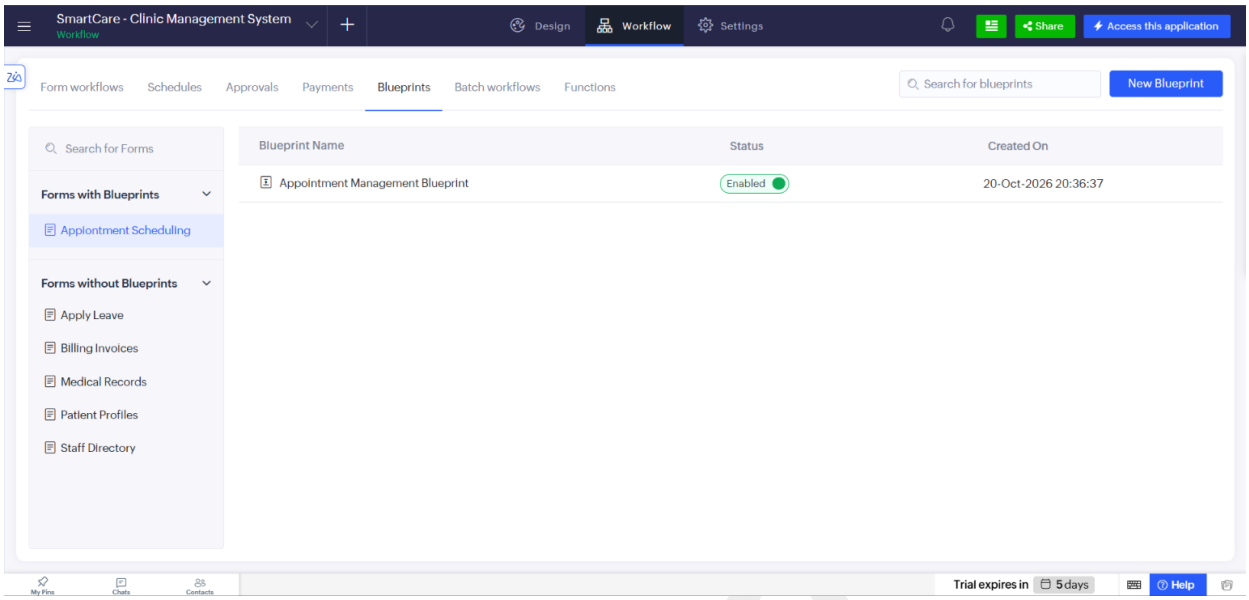

Fig. 7: Appointment Management Blueprint listed and enabled

RESULT:

Thus, the *Appointment Management Blueprint* was successfully created in Zoho Creator for the Appointment Scheduling form of the SmartCare – Clinic Management System application, with stages and transitions defining the appointment process from scheduling to completion, cancellation or no-show, and the blueprint was enabled.
