EX.NO:11 Portal User Management in Zoho Creator

ROLL NO :240701573

NAME: UMAR FAROOK K

AIM:

To add and manage portal users in Zoho Creator for the SmartCare - Clinic Management System application, so that external users can be invited by email, sign up on the portal, and be given access to the application with a suitable permission.

THEORY:

A **portal** in Zoho Creator is a separate, branded login page that lets people outside the organization, such as customers, patients, vendors or partners, use an application without being added as organization users. The people who sign in through it are called **portal users**. Each portal user has their own login and sees only the forms, reports and pages that their permission allows.

The main points of portal user management are:

- **Invitation:** the administrator adds a portal user with a name and an email address. Zoho Creator sends an invitation email containing the login email address and a link to create a password.
- **Sign-up:** the user sets a password that follows the password policy and then logs in to the portal.
- **Status:** a user who has accepted the invitation is listed as *Approved*, while a user who has not completed the sign-up is listed as *Unconfirmed*.
- **Permission:** each portal user is given a permission profile, here Customer or Admin, which decides what the user can view and do in the application.
- **Maintenance:** the administrator can edit a user's name (which applies only inside the portal), change the email address, change the permission, or remove the user.

In this experiment the SmartCare - Clinic Management System is published as a **public** portal with default authentication, and two portal users are added and managed from the Portal section.

PROCEDURE:

1. Sign in to Zoho Creator and click Portal under the Deploy section in the left menu.
2. Select the SmartCare - Clinic Management System application and open the Portal User tab.
3. Click Add Portal Users, enter the name and email address of the user, select the permission Customer and send the invitation.
4. Open the invitation email "Invitation to join SmartCare - Clinic Management System portal", which gives the login email address, and click Create New Password.
5. On the Create Password page enter a password that meets the listed rules (at least 8 characters, one special character, one number, and both upper and lower case letters), re-enter it and click Confirm.
6. Log in to the portal and check that the application opens with its menus and forms, such as Appointment Scheduling.
7. Return to the Portal User tab and check that the user is listed under Approved with the permission Customer.
8. Add a second portal user in the same way and check that the Portal User count becomes 2.
9. Change the filter to Unconfirmed to see the user who has not yet accepted the invitation.
10. Use the options on a user to edit the name, change the email address, and change the permission between Customer and Admin.
11. Open the Portal page and verify that the application is listed as a Public portal with default authentication and 2 portal users.

RESULT:

Thus, portal users were successfully added to the SmartCare - Clinic Management System in Zoho Creator. The invited user received the invitation email, created a password and logged in to the portal, and the portal users were listed as approved or unconfirmed, edited, and assigned permissions, which verified the portal user management of the application.
