EX.NO:12 Approval Process in Zoho Creator

ROLL NO :240701573

NAME: UMAR FAROOK K

AIM:

To create and test an approval process in Zoho Creator for the Apply Leave form of the SmartCare - Clinic Management System application, so that every leave request submitted by a staff member is reviewed and approved or rejected by an authorised approver before it is accepted.

THEORY:

An **approval process** in Zoho Creator is a workflow that holds a record in a pending state after it is submitted and releases it only when a designated person reviews it and takes a decision. It is used wherever a request needs a formal sign-off, such as leave requests, purchase requests, expense claims and booking confirmations. An approval is configured for a particular form under the Workflow section of the application.

The main elements of an approval process are:

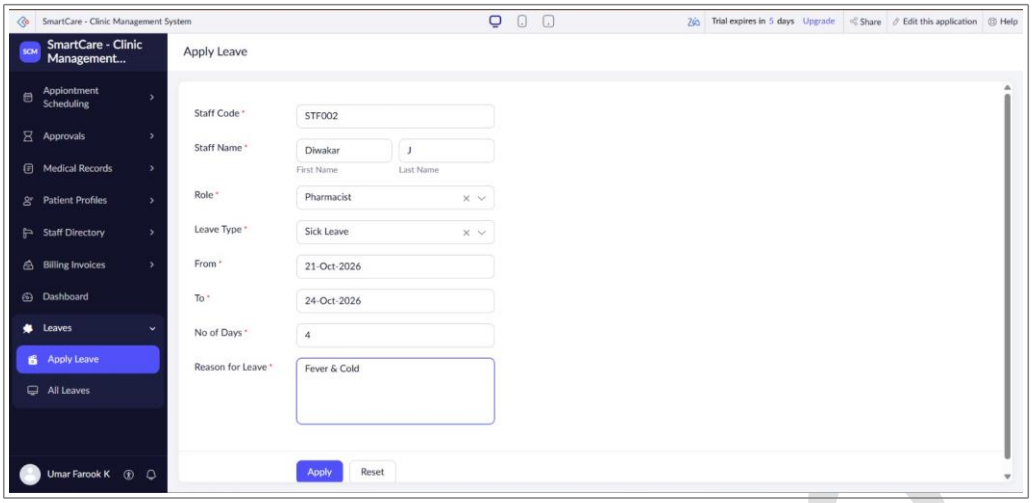

- **Trigger:** the event that starts the approval, usually when a record is added to the form (or edited). The record then waits for a decision.
- **Approver:** the user, role or user field that is responsible for reviewing the record.
- **Approval summary:** a page shown to the approver with the details of the submitted record and the Approve and Reject buttons. A comment can be entered along with the decision.
- **Notifications:** an in-app notification and an email are sent to the approver when an action is pending, and the requester is informed once a decision is taken.
- **Actions on approval / rejection:** tasks that run after the decision, such as sending an email, sending a notification or updating the status of the record.
- **Approval history:** a timeline that records who approved or rejected the record, the date and time, and the comment that was given.

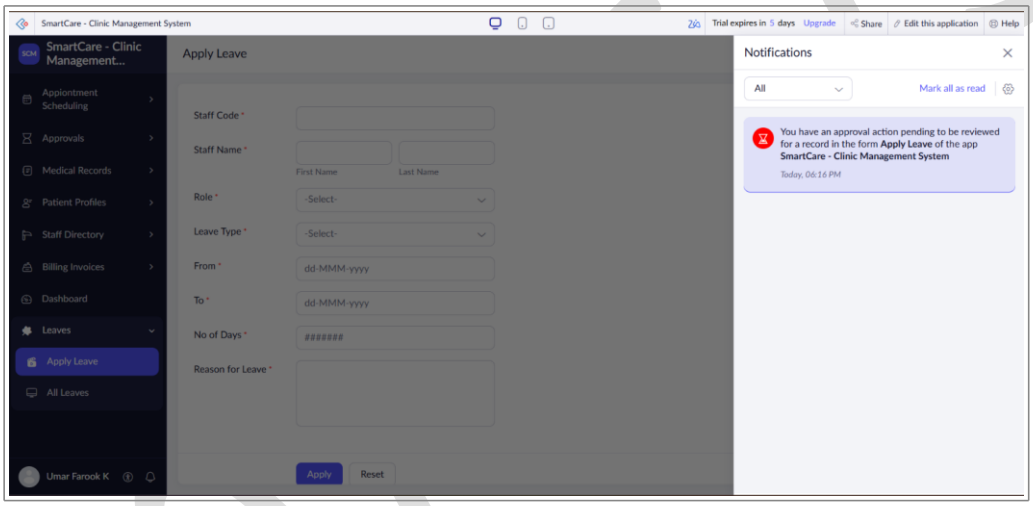

In this experiment the form **Apply Leave** is used to submit a leave request and the approval **Leave Approval** is attached to it. Using an approval process keeps leave decisions controlled and traceable, and removes the need to follow up by phone or on paper.

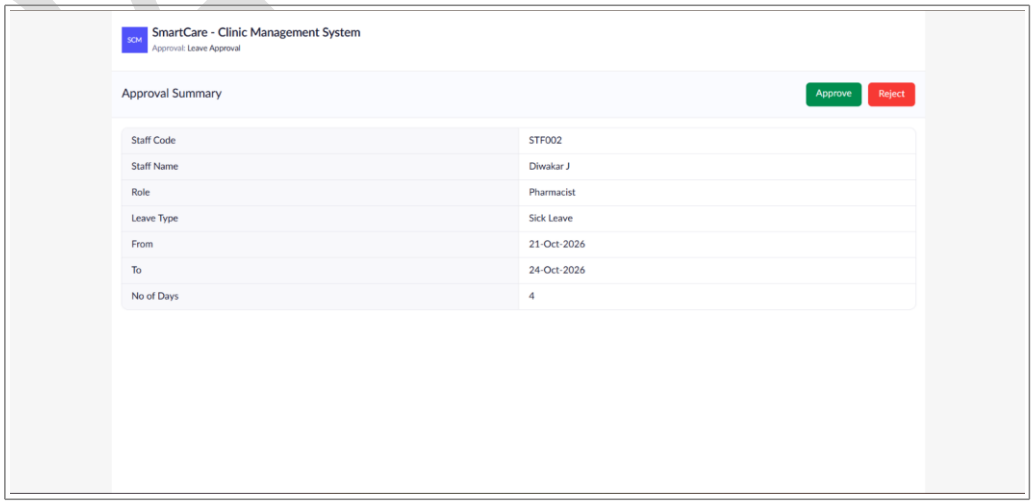

PROCEDURE:

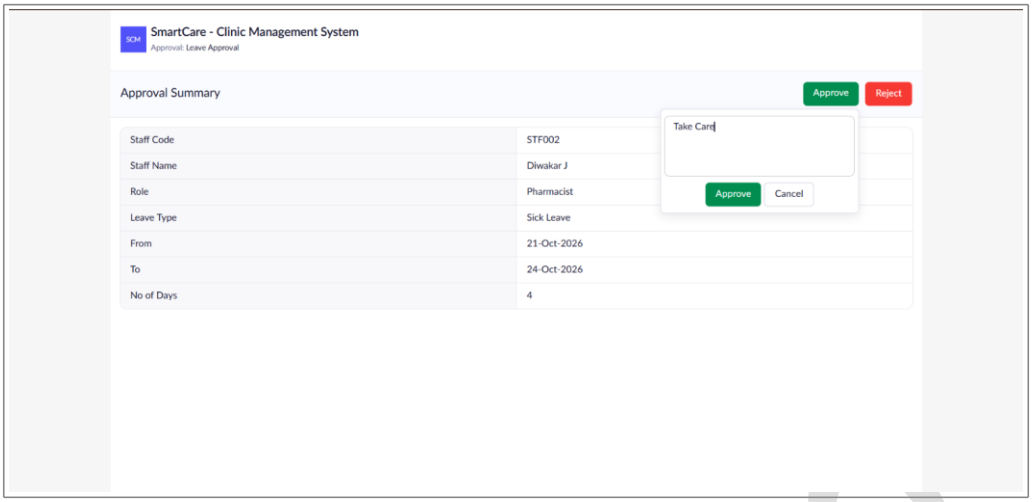

1. Sign in to Zoho Creator and open the SmartCare - Clinic Management System application.
2. Open the Workflow section, select Approvals, and create a new approval named Leave Approval for the Apply Leave form with the trigger set to record submission.
3. Choose the approver for the approval, configure the notification and email sent to the approver, and save the approval.
4. Open the application in the access mode and click Leaves → Apply Leave in the left menu.
5. Fill in the form: Staff Code STF002, Staff Name Diwakar J, Role Pharmacist, Leave Type Sick Leave, From 21-Oct-2026, To 24-Oct-2026, No of Days 4 and Reason for Leave Fever & Cold, then click Apply.
6. After submission the form is reset, and a notification appears for the approver stating that an approval action is pending for a record in the Apply Leave form.
7. Open the notification to view the Approval Summary page, which shows the submitted leave details with the Approve and Reject buttons.
8. Click Approve, enter the comment “Take Care” in the box that opens and click Approve to confirm.
9. Check that the Approval History shows the record as approved by umarfarook.k.dev with the time and the comment.
10. Open the mailbox and verify that the email “Approval Request” with the message “Your request has been approved.” has been received from the Zoho Creator notification address.
